Art Unit: 2817

The disclosure is objected to because of the following informalities: fig. 1 should be labeled as –prior art–; the components of fig. 5 should be described and labeled, at least the HEMTs, microstrip line matching circuits and resistors as these elements are claimed in claims 2-4.

Appropriate correction is required.

This application is in condition for allowance except for the following formal matters:

As above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the cascaded amplifier arrangement of Prudhon et al. (fig. 2) and the parallel amp of Walker (fig. 2).

The following is an examiner's statement of reasons for allowance: Prudhon et al. discloses a first stage AG that includes a parallel RC circuit 19,20 between the input and the amplifier 18 and a shunt resistor 21; the amp includes a negative feedback circuit 23a, and capacitor 24 could be read as an interstage matching circuit. However, the next stage FAM does not contain parallel power devices. Walker discloses a parallel amplifier output stage having RC input circuits 56,62, matching circuits (in and out) and a shunt resistor across the inputs of the power devices M1,M2. However, Walker lacks

the particular drive stage claimed. Since the input stage AG of Prudhon et al. is a duplexer rather than a driver, there would be no motivation to combine the references.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
